

TSB NON-MARKING 'FRICTION' PLATE CLAMPS

The TSB non-marking plate clamps with chain are designed for vertical lifting and transporting of plate material. This particular range of clamps has a large jaw capacity that enables it to be used on a multitude of applications.

The main feature of the TSB plate clamps is the fact that it is non-marking. It works through the process of 'friction'. This is achieved by a special material on the jaw and pad which is similar to brake linings.

Another benefit of the TSB, is that one grab can be used for lifting different materials such as concrete, wood, stone, and hardened steel.

These plate clamps are service-friendly, making it easy to exchange parts, which are readily available.

NB: The surface of the material being gripped must be free of oil, grease or any other liquid to ensure safe transport.
